1) Install FileZilla Server on your Windows machine, create a user account, and set up a shared folder for FTP access.

**Step 1: Download FileZilla Server**

1. Open your web browser.
2. Visit the official website: Download FileZilla Server.
3. Download the Windows installer.
4. Run the installer.
5. Accept the license agreement and complete the installation.
6. Start FileZilla Server.

**Step 2: Configure FileZilla Server**

1. Open FileZilla Server Administration.
2. Connect to your local server (127.0.0.1).
3. Use the administration interface to manage server settings.
4. Confirm that the FTP server is running.

**Step 3: Create a User Account**

1. Open the Users section.
2. Click Add.
3. Enter a username:

hardik

4. Enable the password option.
5. Set a password.
6. Save the configuration.

**Step 4: Create a Shared Folder**

1. Create a folder on your Windows computer:

C:\FTP_Shared

2. Open FileZilla Server.
3. Select the user hardik.
4. Open the Mount points / Shared folders settings.
5. Add the folder C:\FTP_Shared.
6. Set it as the user's accessible home directory.
7. Give the user these permissions:

- Read: Enabled
- Write: Enabled (if file uploads are required)
- Delete: Optional
- Append: Enabled (if uploads need to resume)

8. Save the configuration.

**Step 5: Configure Firewall**

1. Open Windows Security.
2. Select Firewall & network protection.
3. Click Allow an app through firewall.
4. Allow FileZilla Server on your private network.

For FTP, configure the server's listening port (commonly TCP 21) and a passive-mode port range if required.

Security: Use a strong password. For access over an untrusted network, prefer FTPS rather than unencrypted FTP.

**Step 6: Test FTP Connection**

1. Download FileZilla Client.
2. Open FileZilla Client.
3. Enter the following connection details:

| Setting | Value |
|---|---|
| Host | 127.0.0.1 |
| Username | hardik |
| Password | Your created password |
| Port | 21 |
| Protocol | FTP |

4. Click Quickconnect.
5. Check whether the shared folder is accessible.
6. Upload or download a test file.

**Expected Result**

FTP setup completed

- FileZilla Server is installed and running.
- User account hardik is created.

- Shared folder C:\FTP_Shared is configured.
- FTP connection is successful.
- Files can be uploaded and downloaded according to permissions.

**Practical Assignment – Submission**

You can write the following in your practical notebook:

Objective: To install and configure FileZilla Server on Windows, create an FTP user account, and share a folder for file transfer.

Result: Successfully installed FileZilla Server, created an FTP user account, configured a shared folder, and tested FTP connectivity using FileZilla Client.

**2) Use FileZilla Client to connect to your FTP server using the credentials you created, and upload any image file from your computer to the shared folder.**

| **Setting** | **Value** |
|---|---|
| Host | 127.0.0.1 |
| Username | hardik |
| Password | Your created password |
| Port | 21 |

In the left panel (Local site), browse your computer.

Select an image file, for example:

C:\Users\YourName\Pictures\sample.jpg

In the right panel (Remote site), open your FTP shared folder.

**3) Download the uploaded file from your FTP server to a different folder on your computer using FileZilla Client, and verify the file size matches the original.**

**Example verification:**

| **File details** | **Original image** | **Downloaded image** |
|---|---|---|
| **File name** | **sample.jpg** | **sample.jpg** |
| **File size** | **250 KB** | **250 KB** |
| **Transfer status** | **Uploaded** | **Downloaded** |

**4) Create a table comparing FTP and HTTP across at least 5 points: port number, security, data transfer method, use cases, and authentication.**

**Comparison Between FTP and HTTP**

**FTP (File Transfer Protocol) and HTTP (Hypertext Transfer Protocol) are communication protocols used to transfer data over a network. However, they have different purposes and features.**

**FTP vs HTTP Comparison Table**

| Comparison Point | FTP | HTTP |
|---|---|---|
| Full Form | File Transfer Protocol | Hypertext Transfer Protocol |
| Port Number | TCP 21 (control), TCP 20 (traditional active-mode data) | TCP 80 |
| Security | Basic FTP is not encrypted. FTPS provides encryption. | Basic HTTP is not encrypted. HTTPS provides encryption. |
| Data Transfer Method | Transfers files between client and server using upload and download operations. | Transfers web resources using request and response messages. |
| Use Cases | Uploading and downloading files from FTP servers. | Accessing websites, web applications and online services. |
| Authentication | Can require a username and password; anonymous access is also possible. | Usually does not require login, but websites can use passwords, tokens or other authentication methods. |
| Connection | Uses a separate control connection and data connection. | Uses request-response communication. |
| Common Applications | FileZilla Client and FileZilla Server. | Google Chrome, Firefox and websites. |
